## Performance curves (Viscosity: 35 mm<sup>2</sup>/s {cSt})

### Pressure drop characteristics

## Handling

### ● Pilot

- With the internal drain type, maintain the pressure difference between the pilot pressure and the back pressure of the tank line no lower than the minimum pilot pressure.
- When using the product with spool type 3 or 66 as the internal pilot type, insert a resistance valve with a cracking pressure of 0.5 MPa minimum in the tank line and set it as the external drain type. Or, select the main valve option specifications with check valve for pilot pressure (option code: T).
- With the internal pilot type products, block the X port on the mounting face.

### ● Drainage

- Directly connect the drain piping to the tank without merging it with other tank piping.
- External pilot type products can be used as internal drain type regardless of the model.
- Internal pilot type products can be used as internal drain type when the spool type is 2, or 4.
- With internal drain type products, block the Y port on the mounting face.

### ● Tightening torque of pilot valve mounting bolts (M5): 6.5 to 8.5 N·m {65 to 85 kgf·cm}

## Pilot/drain type setting guide

- Either the internal or external pilot and drain types can be set by fitting/removing plugs.

When changing the pilot setting from internal pilot type to external pilot type, one additional dry seal taper thread plug (NPTF<sup>1</sup>/<sub>8</sub>) will be necessary. Order one separately.
